EDUCATION

University of British Columbia

Vancouver, Canada

Bachelor of Science Co-op, Major in Computer Science

Expected Grad: May 2029

- **Coursework:** Software Construction, Intro to Software Engineering, Algorithms & Data Structures, Operating Systems, Computer Systems, Relational Databases
- **Awards:** Outstanding International Student Award; Diversity in CS Hackathon Winner (Matchie)

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java, C/C++

Backend: Node.js, Express, FastAPI, REST APIs, JWT authentication, Clerk, Luxon

Data Modeling: Relational schema design (BCNF/3NF), normalized multi-table modeling, Row-Level Security

Databases: PostgreSQL, Neon, Supabase, MongoDB, Oracle, SQLite

Tools & Testing: Git, Docker, CI/CD (GitHub Actions), Vitest, Supertest, Agile/Scrum

TECHNICAL PROJECTS

Epy (Full-Stack Couple Sleep Accountability App) | *React Native, Node.js, PostgreSQL, Supabase* May 2026 – Present

- Implemented a **JWT-authenticated REST API** with **Row-Level Security** policies across **6 PostgreSQL tables** via Supabase, enforcing access control at the database layer independent of application code.
- Wrote atomic single-query streak updates (**SQL EXISTS** subqueries) and idempotent bulk inserts, replacing a two-step read-then-write pattern vulnerable to **race conditions** under concurrent requests.
- Designed a **UTC-anchored**, timezone-independent cycle-matching system (Luxon/IANA) handling **26+ hour** partner timezone gaps, validated with a **Vitest** suite covering midnight wraparound and DST.
- Built the React Native onboarding flow with session-gated routing and AsyncStorage navigation persistence.

SoCurious (Full-Stack Question App) | *Python, FastAPI, PostgreSQL, React, GitHub Actions* Aug 2026

- Shipped as a full-stack app, **React/Vite/TypeScript** frontend on **Vercel**, **FastAPI** backend on **Render**, **Neon Postgres**, with **GitHub Actions** orchestrating scheduled pipeline runs and model caching.
- Built a multi-source ETL pipeline (**1,484+ posts**, **6 subreddits**, RSS) with a **7-rule** cheap-to-expensive filter layer, catching **2** over-aggressive rules before they reached production.
- Switched ingestion from the Reddit API to RSS after Reddit closed self-serve access mid-project, with **zero changes** to downstream logic thanks to an **adapter-pattern** design.

TravelWrap (Full-Stack School Project) | *TypeScript, Node.js, Express, Oracle, React* Jan 2026 – Mar 2026

- Built a full-stack travel application in a **team of 3**, owning the end-to-end stack from relational database design to a **TypeScript + Node.js REST backend** and a Figma-translated frontend.
- Hardened the backend API layer with input sanitization, structured error handling, and query consolidation.
- Designed fully normalized relational schemas (**BCNF/3NF**) across **15+ tables** modeling travelers, trips, destinations, and purchases, with referential integrity enforced via **cascading foreign keys**.

Matchie (Diversity in CS Winner) | *TypeScript, Express, MongoDB, Clerk, Vercel* YouCode 2026

- Authored **Express** routes connected to **MongoDB** for student profiles, nonprofit listings, and vector matching results, and integrated **Clerk** authentication for secure user sign-up and session management.
- Wired the React/TypeScript frontend to the Express backend via REST APIs, owning the client-to-server data flow.

EXPERIENCE

nwPlus (UX/UI Designer & External Engagement Coordinator)

Sept 2025 – Present

- Designed website/merch and contributed to **day-of operations** for **HackCamp**, **nwHacks**, and **cmd-f**, reaching **1,250+ participants** as part of a **55-member team**.
- Led workshops for **50+ hackers** and **40+ mentors/judges/volunteers** (**Pitching 101**, **Inclusive Language**), and will lead a **database workshop**.
